**WE'RE HIRING: DevOps / Linux Server Engineer**

Location: Pokhara-8, Bagaletole, Nepal
Company: Fishtail Infosolutions Pvt. Ltd.

Fishtail Infosolutions is looking for a DevOps / Linux Server Engineer to help manage, troubleshoot, secure and improve our hosting infrastructure.
We run multiple VPS and dedicated servers hosting a large number of WordPress websites.
The ideal candidate should have strong Linux fundamentals, practical troubleshooting ability and an interest in web hosting infrastructure.

MUST HAVE

- Good knowledge of Linux, preferably Ubuntu/Debian
- SSH, Bash, systemd, cron, logs, permissions and package management
- Experience managing or troubleshooting web servers
- Basic knowledge of PHP, MySQL/MariaDB and WordPress
- Understanding of DNS, SSL and Cloudflare
- Ability to investigate server load, downtime, 5xx errors and performance issues
- Basic scripting or automation skills
- Strong troubleshooting and problem-solving mindset

We expect engineers to investigate the root cause of problems, not just restart services.

GOOD TO HAVE
Experience with any of the following is an advantage, but not required:

- Webuzo, CyberPanel or cPanel/WHM
- OpenLiteSpeed/LiteSpeed, Nginx or Apache
- Redis and caching

- WP-CLI
- Cloudflare WAF
- UFW, Fail2Ban or server security
- WordPress malware cleanup
- Server migrations and backups
- MySQL performance tuning
- Netdata, Grafana, Prometheus or Zabbix
- SPF, DKIM, DMARC and email troubleshooting
- Python or Ansible

Practical skills matter more than certificates.
You may be asked how you would investigate real issues such as high server load, website downtime, 520/5xx errors, disk space problems, database overload, SSL failures or compromised WordPress websites.

**DON'T MEET EVERY REQUIREMENT?**
Apply anyway.
You do not need experience with every technology listed above. If you have strong Linux fundamentals, enjoy troubleshooting and are willing to learn, we would still like to hear from you. Fresh graduates, junior engineers and experienced professionals with relevant practical skills are welcome to apply.

To apply, send your CV along with a short description of any servers, hosting environments or infrastructure you have worked with.
